GETTING STARTED...

A SUCCESSFUL OUTCOME DEPENDS ON A GOOD BEGINNING.

The first step to a successful outcome is to contact INTEGRA Technologies resulting in optimization of your company's investment in Fugitive Emissions Monitoring.

ON-SITE NEEDS ANALYSIS AND PROGRAM DESIGN is a service in which INTEGRA excels. Whether your company intends to operate the Monitoring System or contract it out, INTEGRA is uniquely qualified to guide you through all the stages that are involved in establishing an optimum Emissions Monitoring Program.

Fugitive Emissions Monitoring is a relatively new and highly specialized undertaking for most companies. Many companies have developed their own internal programs for monitoring fugitive emissions, ultimately resulting in expensive failures due to lack of adequate background knowledge and experience. INTEGRA's extensive experience in developing *Best Walked Routes* is just one of the efficiencies provided to ensure that there are no budget costs overruns.

If your company is considering a Fugitive Emissions Program, contact INTEGRA Technologies. We will provide you with objective advice on how to successfully gain effective control of the Compliance Process., by avoiding common pitfalls, resulting in time and cost savings.

DATA INTEGRITY IS THE CRUCIAL ISSUE, which can be efficiently dealt with by use of INTEGRA's SealChek™ Fugitive Emissions Monitoring Services.

When it comes to measuring fugitive emissions, producing reams of information can be a fairly simple process. The difficulty ensues when trying to ensure that the information gathered is dependable data which will ultimately result in meeting mandated Compliance Regulations. The method to produce required integrity is in implementing the following stages to gather meaningful data:

- EFFICIENTLY GATHERED;
- ACCURATELY RECORDED;
- THOROUGHLY DOCUMENTED;
- RELIABLY VALIDATED; AND
- COMPETENTLY REPORTED.

Implementing these stages correctly for the first time is a difficult process. Consistently getting them *RELIABLY* right time after time is a challenge in itself. YET this is the mandated control that must be met year after year to produce *AUTHENTIC DATA* to adequately meet Fugitive Emissions Guidelines. Anything less results in exposed *SAFETY CONCERNS*, *LIABILITY EXPOSURE* and *REGULATORY REPERCUSSIONS*.

INTEGRA is an industry leader in designing and managing the total process, which ranges from simple Consultation to a wide range of On-Site Services.
