

When it comes to measuring fugitive emissions, it is not difficult to generate reams of information. The difficulty comes in ensuring that the information is completely dependable.

In order to produce the required integrity, it is necessary to ensure that data is:

- A) Efficiently Gathered;
- B) Accurately Recorded;
- C) Thoroughly Documented;
- D) Reliably Validated; and
- E) Completely Reported.

Getting all these stages right the first time is difficult enough. Getting them reliably right time after time, is much more difficult. This is the kind of control you must have year after year in order to produce the authentic data you require to adequately meet fugitive emission guidelines.

Achieving compliance standards requires the competence of a highly motivated team of technicians, each skillfully trained and certified in the use of the latest technology and procedures.

Regardless of whether your needs are merely for simple consultation or anything up to total project implementation and management, INTEGRA is uniquely qualified to provide you with total reliability and quality.

SERVICE FEATURES

- Objective Consultation
- Accurate Total Cost Budgets
- Industry-Wide Experience
- Optimized Work Flow
- Certified Full-Time Specialists
- Up-Graded Technical Training
- Knowledge of Latest Regulations
- State-Of-The-Art Electronics
- Testing Fully Computerized
- Choice of Software to Own or Rent
- Customer Designed Reports
- Verified Accuracy of Testing
- Documented Daily Calibration
- Customized Identification
- Manages Large or Small Projects
- Consistent Quality Control

REPAIR CAPABILITIES

- Immediate Attempt at Repair
- Hydro-Pik™ Packing Removal System
- FlangeTrak™ Leak Prevention

MONITORING ACCURACY GUARANTEED

SealChék™

Bolting and Machining the World's Critical Joints
